Steel Reinforcement For Concrete - BS 8666:2005

British Standard BS 8666 the 'Specification for scheduling, dimensioning, bending and cutting of steel reinforcement for concrete'.

The previous standard (BS 4466) is available [here](#) for reference purposes.

Table 1 - Radius Of Bending

Radius of bending:- maximum values requiring bending

Bar Size	6	8	10	12	16	20	25	32	40
Radius (m)	2.5	2.75	3.5	4.25	7.5	14.0	30.0	43.0	58.0

Note. Bars to be formed to a radius exceeding the above dimensions will be supplied straight.

Table 2 - Minimum scheduling radii, former diameters and bend allowances

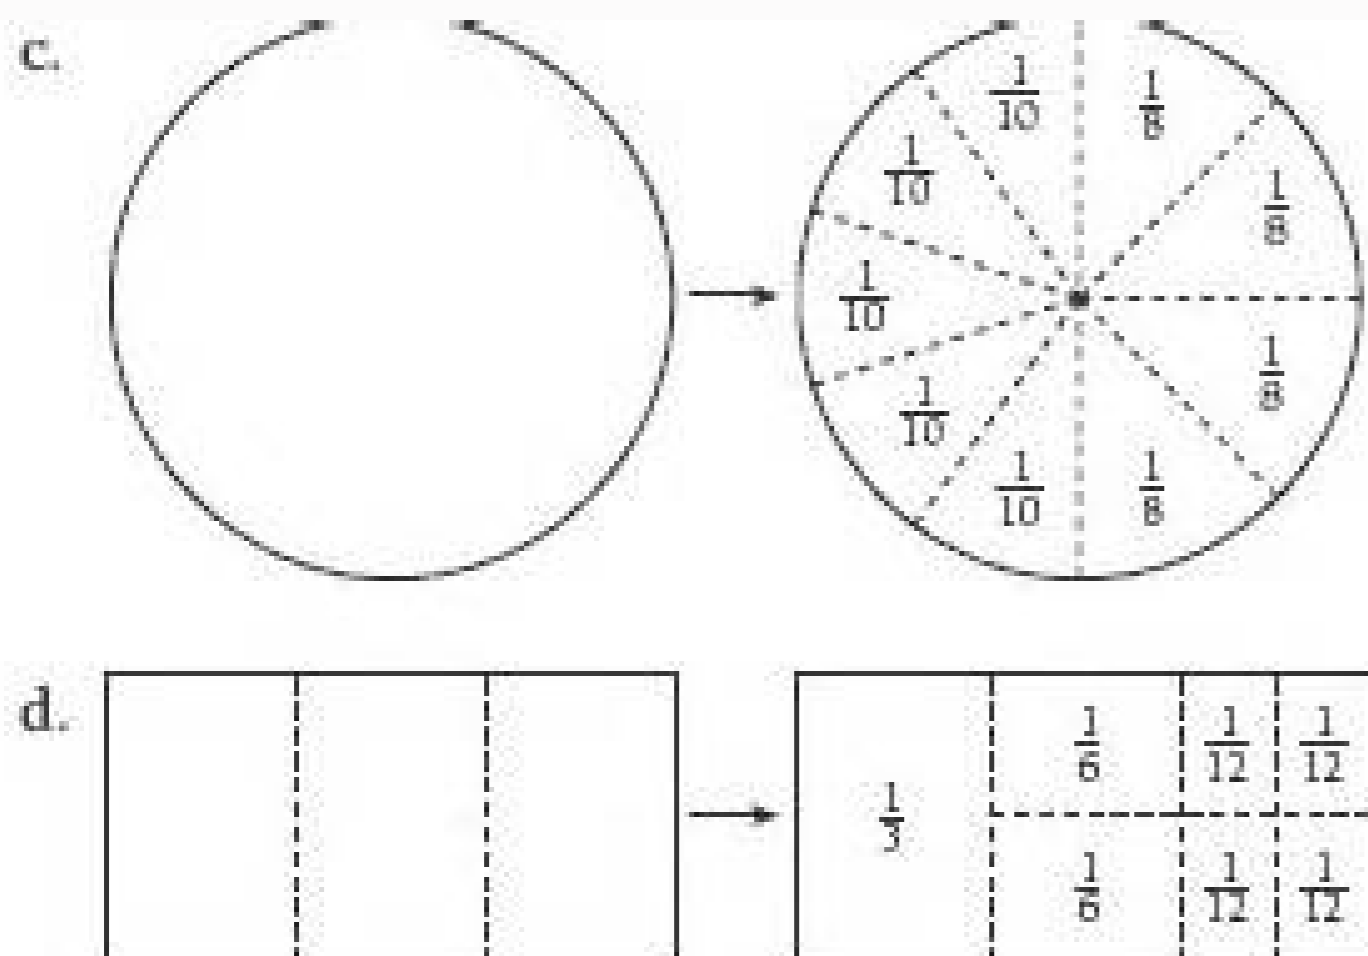

Nominal size of bar, d	Minimum scheduling radius, r	Minimum diameter of bending former, M	Minimum end projection, P General (min 5d Links where straight), including links where bend $\geq 150^\circ$	Minimum end projection, P (min 10d straight)
6	12	24	110*	110*
8	16	32	115*	115*
10	20	40	120*	130
12	24	48	125*	160
16	32	64	130	210
20	70	140	190	290
25	87	175	240	365
32	112	224	305	465
40	140	280	380	580
50	175	350	475	725

* The minimum end projections for smaller bars is governed by the practicalities of bending bars.
Note 1 Due to 'spring back' the actual radius of bend will be slightly greater than half the diameter of former.
Note 2 BS 4449:2005 grade B500A in sizes below 8mm does not conform to BS EN 1992-1-1:2004.

Table 3 - Standard shapes, their method of measurement and calculation of length
